Clear Visuals on Every Meeting

With 2.0 megapixels of detail and automatic image controls like auto-white balance, this webcam maintains a natural look even in varied lighting environments, keeping the focus on your work.

Simple, Reliable Connectivity

Offy Optix is a straightforward solution for staying in touch. By combining a wide-angle lens with built-in privacy and audio, it provides a complete kit that works the moment you plug it in. It is a dependable, no-fuss tool designed to get you through your online classes and meetings with ease.

Consistent Sharpness with no Distractions

The fixed-focus lens is optimized for a range of 50 cm to infinity, ensuring you remain in clear view from the moment you sit down. It provides a stable image that stays sharp throughout your entire session.

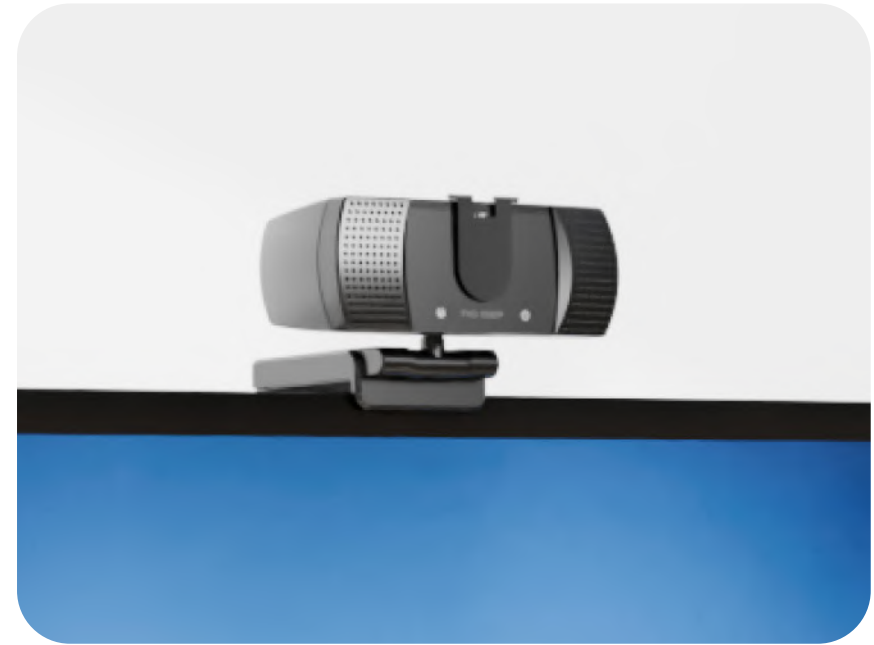

Sound, Simplified

Clear communication is about more than just video. The integrated microphone captures your voice, allowing you to speak freely without the need for an external headset. It is the perfect way to declutter your desk while maintaining quality audio for your listeners.

Guaranteed Security at Your Fingertips

Digital security is important, but physical security is absolute. The included privacy shutter allows you to manually block the lens whenever the camera is not in use. It is a fail-safe way to ensure your home or office remains private on your own terms.

Adaptable to Any Workspace

Flexibility is built into the design. Use the integrated clip to secure the camera to your laptop or monitor, or utilize the standard 1/4" thread to mount it on the included mini tripod. No matter your desk layout, you can always find the perfect angle for your calls.
